CAREER OBJECTIVE

UAE national and ATS-Fujairah graduate (98.5% grade, Top 10 across all UAE ATS campuses) with hands-on experience in embedded systems, AI, computer vision and physics-based modelling. Holding accepted offers to study Electrical Engineering at UNSW Sydney, which have not yet commenced: Foundation studies from 16 November 2026, followed by a Bachelor of Engineering (Honours) from September 2027. Seeking to begin a technical career with Emirates Global Aluminium in power, automation, or maintenance and reliability, including early sponsorship and long-term graduate development to support my Electrical Engineering studies.

EDUCATION

High School Graduation Certificate: Computing & Artificial Intelligence (CAI) | [Institute of Applied Technology \(ATS-Fujairah\)](#)

2021 – 2025 • Fujairah, UAE

- Graduated with a 98.5% grade and ranked among the Top 10 students across all UAE ATS campuses
- Specialised in computing and artificial intelligence, with advanced projects in AI, computer vision and embedded systems
- Graduation project (Security-Tech) recognised at school level and formally presented to evaluators
- Completed Cisco Networking Academy CCNA: Introduction to Networks certification
- Attended Python & Satellite Image Processing workshop at Mohammed Bin Rashid Space Centre

CyberSkills Program: Network Security Administration | [Abu Dhabi Polytechnic](#)

Completed • United Arab Emirates

- Configured and secured Cisco routers in a lab, documenting every IOS command and result in a formal report
- Completed Azure cloud labs: SQL database creation, resource tagging, resource locks and Key Vault
- Scored 29/29 on a CompTIA Network+ style assessment covering troubleshooting, VLANs, VPNs, QoS and port security
- Completed Security Operations Centre (SOC) coursework

Standard Foundation Program: Physical Science Stream | [UNSW College \(Kensington\)](#)

Status: Not Yet Commenced

16 Nov 2026 – 16 Jul 2027 | Offer Accepted • Sydney, Australia

- 36-week pathway into B.Eng (Honours) at UNSW | CRICOS 114315M
- Physical Science stream aligned with Electrical & Computer Engineering requirements

Bachelor of Engineering (Honours): Electrical Engineering | [UNSW Sydney](#)

Status: Not Yet Commenced

Sep 2027 – Sep 2031 | Provisional Offer Accepted • Sydney, Australia

- Major: Electrical Engineering
- 4-year on-campus programme | 192 Units of Credit | CRICOS 056835E
- Offer accepted and awaiting commencement of the Foundation Program in November 2026. No university study has been completed to date.

PROJECTS

Security-Tech: Wearable AI Officer Safety Device | [Graduation Project](#)

2025 • ATS-Fujairah

- Built a Raspberry Pi 4 wearable device to enhance law enforcement officer safety and situational awareness
- Implemented real-time weapon detection (guns and knives) using computer vision and AI
- Developed facial recognition to classify individuals as criminals, fellow officers, or civilians
- Integrated a covert emergency button that silently notifies a connected web dashboard when an officer is in danger
- Integrated AI, computer vision, embedded systems and web technologies into a unified prototype

InterceptorSim 3D: Physics-Based Air Defence Simulator | [Personal Project](#)

Three.js • Dynamics modelling • Monte Carlo validation

- Built a browser-based 3D physics engine modelling the motion of 17 threat systems and 14 interceptor systems
- Validated results with Monte Carlo runs across scenarios
- Found and fixed numerical integration errors, altitude envelope mismatches and termination-logic faults until outputs matched expected physics

DLP Chat Log Analyzer | [Research Project](#)

Node.js • Express • Claude API

- Built a tool for insider-threat research that analyses chat logs in batches and exports findings to CSV

CERTIFICATIONS & TRAINING

Microsoft Certified: Azure Fundamentals | [Microsoft](#)

July 2026

- Cloud concepts, core Azure services, security and governance fundamentals

PCEP: Certified Entry-Level Python Programmer | [Python Institute](#)

June 2026

- Python programming fundamentals: data types, control flow, collections, functions and exceptions

CCNA: Introduction to Networks | [Cisco Networking Academy / Institute of Applied Technology](#)

2025

- Covered network protocols, IP addressing, and fundamentals of routing and switching
- Practical lab experience with Cisco equipment and Packet Tracer simulations

Python & Satellite Image Processing Workshop | [Mohammed Bin Rashid Space Centre \(MBRSC\): ESGRS](#)

2024 – 2025

- Learned remote sensing principles and satellite data analysis techniques using Python
- Applied skills to monitor and analyse real-world events, including UAE flooding incidents

APPLIED SKILLS: DEMONSTRATED IN PROJECTS AND LABS

Python: Used to build the full detection pipeline in Security-Tech, integrating OpenCV and AI models on Raspberry Pi 4.

Artificial Intelligence & Computer Vision: Trained and deployed real-time object detection models to identify guns and knives within a live camera feed.

Facial Recognition: Implemented a face classification system to identify known criminals, fellow officers, and civilians in real time.

Embedded Systems (Raspberry Pi 4): Configured hardware modules including GPS, sound sensor, AI camera (CSI), emergency button, and wireless communication via GPIO and UART.

Web Dashboard & Wireless Communication: Built a connected web interface to receive and display real-time alerts triggered by the emergency button and threat detections.

Modelling & Numerical Analysis: Built and validated a 3D physics engine in InterceptorSim using numerical integration and Monte Carlo analysis.

Project Management: Led the end-to-end development of Security-Tech from concept to live demonstration, coordinating hardware, software and presentation.

Networking (CCNA): Applied networking knowledge to connect the wearable device to a central command system via wireless protocols; secured Cisco routers in CyberSkills labs.

Cloud & Security: Azure labs (SQL, Key Vault, resource locks), SOC coursework, and introductory bug bounty training through PortSwigger Web Security Academy.

Java: Studied as part of the IAT computing curriculum alongside Python for software development fundamentals.

LANGUAGES

Arabic (Native) **English** (Professional Proficiency)

Open to early sponsorship and graduate development opportunities
