CAREER OBJECTIVE

UAE national and ATS-Fujairah graduate (98.5% GPA, Top 10 across all UAE campuses) with hands-on experience in AI, embedded systems, and computer vision. Holding a provisional offer to study Electrical Engineering at UNSW Sydney, commencing Foundation studies in November 2026, followed by a Bachelor of Engineering (Honours) commencing September 2027. Seeking early sponsorship and long-term graduate development opportunities within the engineering and technology sector.

EDUCATION

High School Diploma — Computing & Artificial Intelligence (CAI) | [Institute of Applied Technology \(ATS-Fujairah\)](#)

2021 – 2025 • Fujairah, UAE

- Graduated with a 98.5% grade and ranked among the Top 10 students across all UAE ATS campuses
- Specialised in computing and artificial intelligence, with advanced projects in AI, computer vision, and embedded systems
- Graduation project (Security-Tech) recognised at school level and formally presented to evaluators
- Completed Cisco Networking Academy CCNA: Introduction to Networks certification
- Attended Python & Satellite Image Processing workshop at Mohammed Bin Rashid Space Centre

Standard Foundation Program — Physical Science Stream | [UNSW College \(Kensington\)](#)

Status: Not Yet Commenced

16 Nov 2026 – 16 Jul 2027 | Offer Accepted • Sydney, Australia

- 36-week pathway into B.Eng (Honours) at UNSW | CRICOS 114315M
- Physical Science stream aligned with Electrical & Computer Engineering requirements

Bachelor of Engineering (Honours) — Electrical Engineering | [UNSW Sydney](#)

Status: Not Yet Commenced

Sep 2027 – Sep 2031 | Provisional Offer Accepted • Sydney, Australia

- Major: Electrical Engineering
- 4-year on-campus programme | 192 Units of Credit | CRICOS 056835E
- Offer accepted — awaiting commencement of Foundation Program in November 2026

PROJECTS

Security-Tech — Wearable AI Officer Safety Device | [Graduation Project](#)

- Built a Raspberry Pi 4 wearable device to enhance law enforcement officer safety and situational awareness
- Implemented real-time weapon detection (guns and knives) using computer vision and AI
- Developed facial recognition to classify individuals as criminals, fellow officers, or civilians
- Integrated a covert emergency button that silently notifies a connected web dashboard when an officer is in danger
- Integrated AI, computer vision, embedded systems, and web technologies into a unified prototype

CERTIFICATIONS & TRAINING

CCNA: Introduction to Networks | Cisco Networking Academy / Institute of Applied Technology

2025

- Covered network protocols, IP addressing, and fundamentals of routing and switching
- Practical lab experience with Cisco equipment and Packet Tracer simulations

Python & Satellite Image Processing Workshop | Mohammed Bin Rashid Space Centre (MBRSC) — ESGRS

2024–2025

- Learned remote sensing principles and satellite data analysis techniques using Python
- Applied skills to monitor and analyse real-world events, including UAE flooding incidents

APPLIED SKILLS — DEMONSTRATED IN SECURITY-TECH

Python — Used to build the full detection pipeline, integrating OpenCV and AI models on Raspberry Pi 4.

Artificial Intelligence & Computer Vision — Trained and deployed real-time object detection models to identify guns and knives within a live camera feed.

Facial Recognition — Implemented a face classification system to identify known criminals, fellow officers, and civilians in real time.

Embedded Systems (Raspberry Pi 4) — Configured hardware modules including GPS, sound sensor, AI camera (CSI), emergency button, and wireless communication via GPIO and UART.

Web Dashboard & Wireless Communication — Built a connected web interface to receive and display real-time alerts triggered by the emergency button and threat detections.

Project Management — Led the end-to-end development of Security-Tech from concept to live demonstration, coordinating hardware, software, and presentation.

Networking (CCNA) — Applied networking knowledge to connect the wearable device to a central command system via wireless protocols.

Java — Studied as part of the IAT computing curriculum alongside Python for software development fundamentals.

LANGUAGES

Arabic (Native) English (Professional Proficiency)

Open to early sponsorship and graduate development opportunities
